

The data do not ask for the artefact

Loss of the unchanged SC-041 kite objective at the truth, the M = 22 endpoint, and the endpoint low-passed to K.

Truth fits the data to $7e-29$; the endpoint sits at $2.7e-9$. Keeping only modes up to 32 (≤ 32) removes the artefact (radius $0.08 \rightarrow 3.4$ mm) and cuts Hausdorff 40%, for $2.4\times$ the loss. Blue bars: endpoint low-passed to that band.
