

What was tested, and what held

Outsider review of SC-041, parts 1–6. Every verdict against a plan committed before the run.

Part	Hypothesis	Result
1	Kite's sharp point is the kite's tip	 No: spurious flank staircase, 5 mm from the tip
1	The data require that feature	 No: truth loss 7e-29 vs 2.7e-9
2	Dimming atlas colour means a better shape	 No: tracks loss (97%), not Hausdorff (39–71%)
2	The atlas can see the artefact	 No: 93% of its energy above order 30
3	A truth-free shape signal flags artefacts	 No: roughness anti-correlated with error
4	Artefacts form where the data are blind	 No, inverted: best-determined 10% (13/13)
5	Sensitivity-weighted step suppresses them	 Inert: weight 0.88–1.12, metric does not steer
6	Pointwise sensitivity predicts the site	 Refuted on unseen shapes (0 of 2)
6	Posterior ratio predicts the site	 Supported 2/2, but reduces to entry curvature
